Display Search Results In A Table

To get your resulting students to show up in a table instead of in a rendered list of student views, you can use HTML's table features. Modify the loop that displays your students to display them in a table format:

```erb
<div>
  <% if @students.empty? %>
    <% if @search_params.empty? %>
      <p>Please search for students to display results.</p>
    <% else %>
      <p>No students found matching your criteria.</p>
    <% end %>
  <% else %>
    <table>
      <thead>
        <tr>
          <th>First Name</th>
          <th>Last Name</th>
          <th>Major</th>
          <th>Graduation Date</th>
          <th>Actions</th>
        </tr>
      </thead>
      <tbody>
        <% @students.each do |student| %>
          <tr>
            <td><%= student.first_name %></td>
            <td><%= student.last_name %></td>
            <td><%= student.major %></td>
            <td><%= student.graduation_date.strftime('%B %d, %Y') %></td>
            <td>
              <%= link_to 'Show', student %>
              <%= link_to 'Edit', edit_student_path(student) %>
              <%= button_to 'Delete', student, method: :delete %>
            </td>
          </tr>
        <% end %>
      </tbody>
    </table>
  <% end %>
</div>
```
